

DUHUI

QUALITY PARTS

AUTO ENGINE TIMING SYSTEM KITS

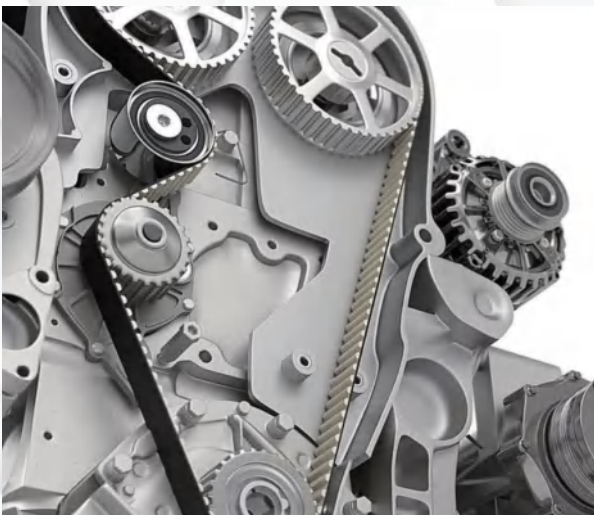

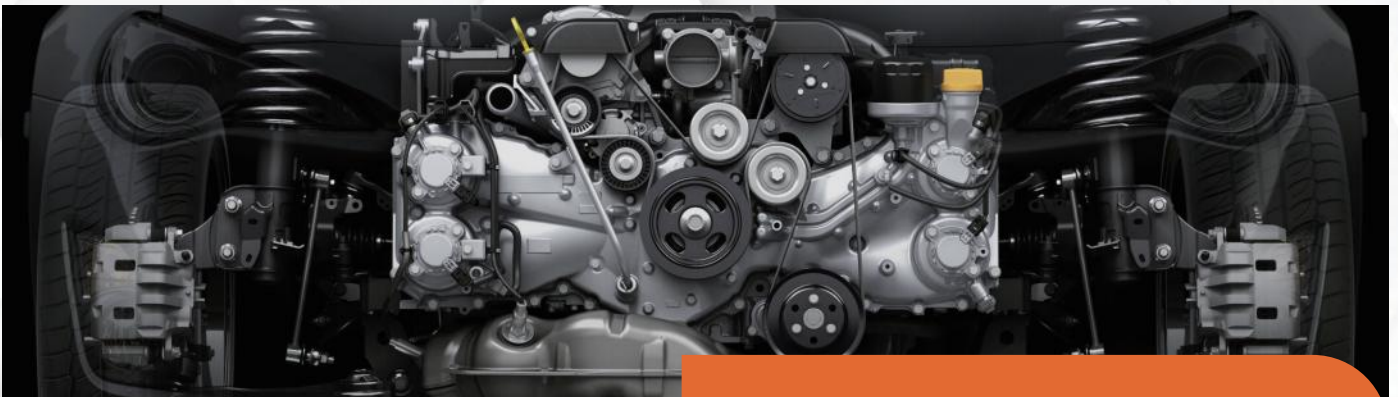

TS 16949

Provide quality products and trustworthy services to global auto parts consumers

COMPANY PROFILE

Hangzhou DUHUI Auto Parts Co., Ltd. was established in 2003 and is located in Xiaoshan District Economic Development Zone, Hangzhou City. The company integrates supply chain development, quality management, warehousing, business operations, and other management capabilities, and is built through an information system to provide customers with one-stop services product solutions.

DUHUI has been focusing on automotive bearings for 20+ years, it mainly produces wheel hub, wheel bearing, release bearing, auto engine timing system kits, etc., covering more than 4,000+ auto parts models, including all mainstream models on the market.

QUALITY CONTROL

We have installed a complete line of international-advanced production equipments and implemented fabrication technology. The equipments include SIGMA numerically controlled lathe Durability Test Machine, etc.

TESTING CENTER

We installed a complete international-advanced testing and examining equipments to ensure the quality of our products. Our Quality Department strictly test each unit according to ISO/TS standards.

AUTO ENGINE TIMING SYSTEM KITS

The automobile timing system is an important part of the engine valve mechanism and one of the important factors to ensure the efficient operation of the engine.

The transmission parts of the automobile timing system are divided into timing belts and timing chains. In terms of function, the timing belt and the timing chain are the same. They mainly control the opening and closing of the valves by connecting with the crankshaft and cooperating with a certain transmission, so as to accurately realize the timing opening and closing of the corresponding intake and exhaust valves, so that the fresh air can enter the cylinder in time and the exhaust gas can be discharged from the cylinder in time, ensuring that the engine has normal and good power output performance.

The timing kit is a maintenance component package designed for automobile engines. It covers the core components required for the timing transmission system and plays an irreplaceable role in maintaining the normal operation of the engine.

Components:

- **Timing belt or chain:** As a transmission medium, it transmits the power of the crankshaft to the camshaft, thereby controlling the opening and closing of the valve.
- **Tensioner and tensioner:** Used to adjust and maintain the proper tension of the timing belt or chain to prevent it from loosening or being overly tight.
- **Idler:** Plays a supporting and guiding role in the timing transmission system to ensure that the transmission components move along the predetermined path.
- **Hardware such as bolts, nuts, gaskets, etc.:** Although these parts may seem small, they play a key role in maintaining the stability of the entire timing transmission system.

Specific accessories may vary depending on vehicle model, engine model and manufacturer. When purchasing and replacing timing chain kits, it is recommended to refer to the vehicle manufacturer's official recommendations or consult a professional technician to ensure the correct kit is selected and installed correctly.

TIMING BELT KITS

Timing belt:

It is an important part of the engine valve system. It ensures the accuracy of intake and exhaust timing by connecting with the crankshaft and matching a certain transmission ratio. The timing belt is an important part connecting the crankshaft and the camshaft, ensuring the correct matching of the valve and piston valve timing to make the engine work normally.

Tension pulley:

It is mainly used for the belt tensioning device of the automobile transmission system. It can automatically adjust the tension according to the different tightness of the belt to make the transmission system stable, safe and reliable. It consists of a fixed housing, a tensioning arm, a wheel body, a torsion spring, a rolling bearing and a spring sleeve.

Tensioner:

It is used in conjunction with the tension pulley to ensure that the belt always maintains proper tension.

Idler (guide wheel):

It assists the tensioner and belt to work, changes the direction of the belt, and increases the inclusion angle of the belt and the pulley.

Related hardware:

It also includes hardware such as bolts, nuts, and gaskets that should be replaced regularly to ensure that the timing transmission system and the engine are in an ideal state after maintenance.

Auxiliary materials such as sealants:

In some kits, auxiliary materials such as sealants may be included to ensure the sealing and reliability during installation.

TIMING CHAIN KITS

Timing chain:

This is the core part of the kit. It replaces the traditional timing belt and is used to connect the crankshaft and camshaft to ensure the correct matching of the valve and piston valve timing phase.

Chain guide (guide tensioner):

The chain guide is used to support and guide the timing chain to ensure the stability and accuracy of the chain during operation.

Chain tensioner:

The chain tensioner is used to automatically adjust the tension of the chain, keep the chain running within the appropriate tension range, and prevent the chain from loosening or over-tensioning.

Idler (guide wheel):

Assists the tensioner and chain to work, change the direction of the chain, and increase the inclusion angle of the chain and pulley.

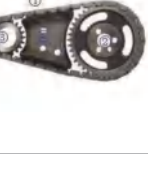

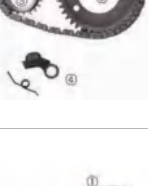

Related hardware:

This includes necessary installation and fixing accessories such as bolts, nuts, and gaskets to ensure the correct installation and tightening of the various components of the kit.

Auxiliary materials such as sealants:

In some kits, auxiliary materials such as sealants may be included to ensure sealing and reliability during installation.
